Smarter Technologies offers a range of CCTV devices for use in different locations, these include mains- & solar-powered options with the use of 4G connectivity meaning that location and placement is not an issue. One of the advantages of the Smarter Technologies system is that where suitable you can use a “Master” unit in conjunction with up to 3 “Slave” units to share the data connection of the master unit to help keep the cost down. The cameras are controlled through an app which is accessible on IOS & Android, this allows real time monitoring and control of the Pan & Tilt controls. Footage is recorded on to a card in the master camera and playback is accessed through the control app.
